

ENVIRONMENT AND CLIMATE CHANGE POLICY

As Eczacıbaşı Consumer Products, our aim based on the principles of respect for individuals, society, and the environment, is to support sustainable development, integrate environmental protection into our strategy, improve the living standard of the society, and leave a livable world for future generations. In line with this objective, our commitments are as follows:

- To comply with national and international environmental and climate change legislation and other requirements that we are subject to applicable to our operations.
- To adopt Group standards, internationally accepted principles, and best practices in matters not covered by laws or regulations
- To identify the risks and opportunities arising from environmental and climate change impacts throughout the life cycle, utilize the outcomes in determining our business strategies, and manage the risks effectively.
- To consider environmental impacts and climate change risks while making financial and physical investment decisions and carry out assessment studies accordingly.
- To prioritize the use of technologies that both facilitate the transition to a low carbon economy and take into account the dynamics of the sector, and undertake projects that help to combat climate change.
- To follow the best available techniques and technologies in plant and process design, production technologies preferences, and to focus on the efficient use of natural resources.
- To diversify energy sources in light of climate change risks, and encourage the use of renewable energy.
- To aim for secure and efficient use of energy and conducting energy efficiency initiatives.
- To control environmental impacts throughout the product life cycle and conduct eco-friendly product development activities.
- To reduce water use and mitigate water-related risks
- To encourage wastewater recovery and considering environmental and social during water withdrawal.
- With a circular economy approach, to support efforts to minimize resource use and packaging; use materials with low environmental impact.
- Strive to prevent the generation of waste at its source, in line with the value chain approach. Wastes are reduced, separated, recovered, and, whenever possible, waste is treated as a resource.
- To consider climate change and environmental impacts in purchasing and procurement processes and to encourage suppliers on these issues.
- To focus on continuous improvement to advance environmental and climate change performance.
- To collaborate with relevant institutions and organizations.
- To conduct training and communication activities to enhance awareness of environmental and climate change issues among employees, external stakeholders, and the general public.
- To operate in accordance with the “Eczacıbaşı Group Environment and Climate Change Policy”.
